

## Potential Bicyclist/Pedestrian Treatments

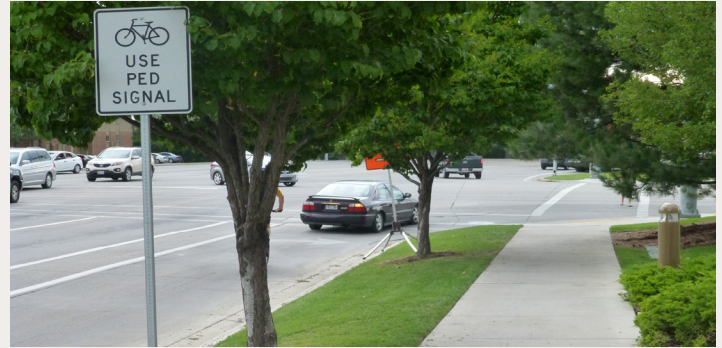

### Signal Phasing/Timing Changes

Pedestrian countdown signals, longer crossing phases, and other signal changes can improve pedestrian/bicyclist safety.

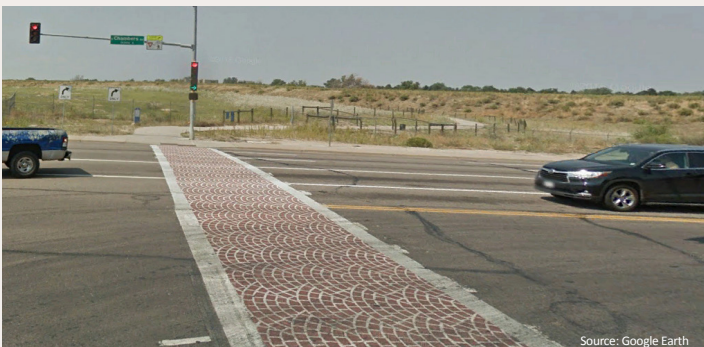

### Sidewalk Improvements

Detached sidewalks include a buffer between vehicular traffic and pedestrians.

### Enhanced Crosswalks

High-visibility markings or decorative materials improve visibility and aesthetics of pedestrian crossing areas.

### Raised Crossings

Raised crossings for channelized right-turn lanes call attention to the potential presence of pedestrians while slowing turning vehicular movements.

### Curb Ramps

Curb ramps provide a smooth transition between the sidewalk and street while also meeting accessibility standards.

### Wayfinding Signage

Wayfinding signage provides information about destinations and optimal routes for people walking and biking.
